On behalf of the Irish Medication Safety Network In consultation with Irish Medication Safety Network members

About the IMSN

The Irish Medication Safety Network (IMSN) is a voluntary, independent group, comprising hospital pharmacy-based specialists actively involved in medication safety and Medication Safety Facilitators/Coordinators which aims to promote patient safety and safe medication practices through collaboration and shared learning within the network and with the wider community.

Website: www.imsn.ie Email: enquiries@imsn.ie

Notes for Use

1. The following list of Sound-Alike Look-Alike Drugs (SALAD) has been developed as a general reference for use in the Irish setting. It is intended to be used in conjunction with the current IMSN **Briefing Document on Sound Alike Look Alike Drugs (SALADs) in the Hospital Setting** (available on www.imsn.ie).
2. The list of SALAD pairs has been derived from multiple sources, including personal communications from Irish hospitals, internal hospital alerts, published alerts, and lists of confused or potentially confusable drug names published by other agencies. Some sources appear to have cross-referenced others so the citing of a SALAD pair in multiple references is not necessarily indicative of how frequently that particular pair was confused. Nor was it possible to establish whether the confusion resulted in patient harm or how the confusion occurred.
3. Designation of drug names as sound-alike or look-alike is both highly subjective and very unpredictable. Moreover, SALADs are identified and reported, new products are launched, and new packaging is designed on an ongoing basis. Therefore,
 - i. Please note that this list represents the opinions of the various contributors. It does not necessarily express the views of either the author or the Irish Medication Safety Network.
 - ii. This list is neither definitive nor an indication that any particular action or decision should be taken.
 - iii. This list cannot be assumed to be either comprehensive or current.
4. We have kept the list as simple as possible and have used only the name cited in the original source - therefore, a drug may be listed under both its generic name and also as a particular product. To avoid a very cluttered list, we have removed references to strength, route and other descriptors unless of immediate relevance to the confusion. Each SALAD pair appears only once on the list.

To search for a particular drug or product, we suggest using the "Find" function in the Edit tab or "Ctrl F". Alternatively, you may wish to view a defined alphabetized short list of SALAD Pairs. Go to 'Contents' and place the cursor over the desired list to open.
5. Drugs were included if they were listed in any of: HPRAs website³⁹, www.medicines.ie⁴⁰, BNF⁴¹ or EMA⁴².

The list will be updated periodically. If you have any SALAD pairs from your institution that you think are relevant to the Irish setting, please e-mail enquiries@imsn.ie with "SALAD BAR" in the Subject line with details (and photographs for LOOK-ALIKE pairs) for consideration. SALAD concerns should also be reported to the manufacturers and appropriate agencies.

Publication Date: August 2024 (version 3)

©IMSN. The IMSN allows the sharing or reproduction of this material, provided that the source of the information is appropriately acknowledged and a link to our website is supplied.

Every effort has been made to ensure the accuracy of the content of this document. However, the IMSN cannot accept legal responsibility for any errors or omissions.

It is recommended that you also refer to www.imsn.ie to ensure you are using the current version as the document may have been updated since this was accessed.

We recommend that:

- 1) organisations use their own experience, supplemented by this and/or other lists to compile their own SALAD list**
- 2) organisations consider development of a SALAD risk assessment tool (scoring risk of likelihood versus risk of harm) to determine the risk associated with a particular SALAD pairing⁴⁶**
- 3) local SALAD lists are short, relevant, and regularly reviewed**
